

SEASON EXTENSION UP CLOSE

SUNDAY, OCTOBER 6 | 1-4 P.M. | \$20

**McHenry County College | Building D (Room D160)
8900 US Hwy 14, Crystal Lake, IL.**

What if we could add a month or two onto each end of the growing season? Or, what if, with the right plant varieties and appropriate covering, we could grow and harvest year-round...without added heat?

Enter the high and low tunnel. In this workshop, you'll learn about various high and low tunnels in a classroom presentation. Then, we'll head out to the MCC Student Farm to see two distinct high tunnels in operation - one with electricity and one without. We'll discuss the pros and cons of each and see a low tunnel as well.

If you are considering season extension with tunnels, you'll benefit from this deep dive into their construction and use.
